THE COLD AND WARM AGE HARDENING OF
ALUMINUM-ZINC ALLOYS. [1960] [20]p. 5 refs.
Order from S.A. mt\$2.70, ph\$4.80 61-10149

Trans. of Berg. und Hüttenmännische Monatshefte
(Austria) 1953, v. 103, p. 114-118.

The cold and warm age-hardening of solution-treated and water-quenched aluminum-zinc and aluminum-zinc-copper alloys follows a simple law, if the criterion used is the time required to attain maximum hardness. In the binary system, age-hardened alloys with up to 83 at.-% aluminum (67 wt.-%) are the most stable at room temperature. Copper-bearing alloys of this type extend to about 75 at.-% (56 wt.-%) zinc. Binary alloys attain their maximum hardness during room temperature hardening, whereas copper-bearing alloys must be tempered. From the temperature-dependence of the age-hardening times, values were (Metallurgy, TT, v. 5, no. 4) (over)
